Question (a) Histogram

data <- data_raw %>% clean_names()

Question (b) Indicator = 1 if $pct_black > sample median$, 0 otherwise

Question (c) Regression

```
model <- lm_robust(formula = dnox_masstons ~ nbp, data = data)
summary(model)

##
## Call:
## lm_robust(formula = dnox_masstons ~ nbp, data = data)
##
## Standard error type: HC2
##
## Coefficients:
## Coefficients:
## Estimate Std. Error t value
Pr(>|t|) CI Lower CI Upper
```

```
## (Intercept)
                 -3.615
                            0.4207
                                    -8.593 0.000000000000001181
                                                                             -2.789
                 -3.908
                                    -4.911 0.0000012411634147570
                                                                    -5.472
## nbp
                            0.7958
                                                                             -2.345
##
                DF
## (Intercept) 483
## nbp
               483
##
## Multiple R-squared: 0.05152,
                                    Adjusted R-squared:
## F-statistic: 24.12 on 1 and 483 DF, p-value: 0.000001241
```

```
Intercept = -3.615 tons
```

If the county was NOT regulated under the NOx Budget Program (NBP = 0), the change in annual NOx emissions from all power plants in that county between 2000 and 2008

```
Slope coefficient = -3.908 tons
```

The difference in the change in annual NOx emissions from all power plants between 2000 and 2008 in a county regulated under the NOx Budget Program and another county NOT regulated under the NOx Budget Program (i.e. regulation / no regulation difference in annual NOx emissions)

Question (d) Interaction between NBP and D

```
##
## Call:
## lm_robust(formula = dnox_masstons ~ nbp + D + nbp:D, data = data)
##
## Standard error type:
##
## Coefficients:
                                                 Pr(>|t|) CI Lower CI Upper DF
##
               Estimate Std. Error t value
## (Intercept)
                 -2.601
                             0.469
                                    -5.547 0.00000004815
                                                            -3.523
                                                                     -1.6798 481
## nbp

```

?????????

Intercept: -3.615 tons

The change in annual NOx emissions from all power plants in a county between 2000 and 2008, if the county was NOT regulated under the NOx Budget Program (NBP = 0)

```
NBP coefficient = -6.333 tons
```

The difference in the change in annual NOx emissions from all power plants between 2000 and 2008 in a county regulated under the NOx Budget Program and another county NOT regulated under the NOx Budget Program (i.e. regulation / no regulation difference in annual NOx emissions)

\mathbf{D} coefficient = -2.215 tons

The difference in the change in annual NOx emissions from all power plants between 2000 and 2008 in a county with pct_black above the sample median compared to a county with pct_black below the sample median.

Interaction coefficient = 5.035 tons

The difference in the change in annual NOx emissions from all power plants between 2000 and 2008 in a county regulated under the NOx Budget Program and with pct_black above the sample median compared to another county NOT regulated under the NOx Budget Program and below the sample median.

?????????

Question (e) Prediction and 95% confidence interval
